

## PRESS RELEASE

**Winterthur, Switzerland - May 29, 2019 - The founders of LuckaBox Logistics AG, Aike Festini and Maite Mihm, are founding the spin-off sweep tech - the first company in Europe to specialize in technology and logistics services for micro mobility providers.**

The business idea for sweep tech was born from the experience that LuckaBox has gained in the field of micro mobility in Zurich from the very beginning. Up to now, sweep has been on the road in several large European cities, but Switzerland is also becoming more and more attractive with the continuous opening for suppliers of electric scooters (e-scooters) in cities. sweep plays a leading role as a technology and logistics service provider. The launch in Germany is also imminent - only two weeks ago the decision for the approval of e-scooters was made in the Federal Council; preparations are therefore in full swing.

sweep is well prepared for the boom with its technology produced entirely in Switzerland. A professional overview of all current operations, access to necessary logistics services and experience are the unique selling points. Fleet availability, repairs and spare parts management can be monitored and coordinated in real time, and personalised statistics can be consulted.

In addition to the operational overview, sweep specializes in the placement, collection, maintenance, battery charging, storage and redistribution of e-scooters. Sweepers - own employees with logistics know-how - take care of the smooth operation of these processes. They ensure that the system providers can concentrate on what they came for: emission-free and contemporary mobility in urban areas - all over Europe. This way sweep remains true to the credo of LuckaBox: fair working conditions for all parties involved.

An important launch is imminent for sweep on 1 June in Winterthur: together with the largest European system provider VOI, 100 e-scooters will be placed in the city. In close cooperation, the two companies will ensure a smooth start and operation of the fleet and lay the foundation stone for VOI's presence in Switzerland.
